## SEE-U Costa Rica

## Agroforestry and the Ecology of Coffee

6 credits, 5 weeks

Summer 2019: May 22—June 25

Instructor: Dr. Mandi Caudill,

Columbia University Adjunct Instructor

Turrialba

Coffee Plantation

Jicotea

Although about one billion cups are coffee are consumed worldwide daily—most people do not link the dark, velvety liquid in their cup with the abundant plant and animal life found in regions where coffee is grown. The way that coffee farms are managed varies widely— from a monoculture of coffee plants with little to no shade trees intermixed with the crop ("sun coffee") to farms with many different types of trees and vegetation interspersed between the coffee plants ("shade coffee"). Sun coffee often uses heavy chemical inputs and provides little habitat for wildlife, whereas shade coffee, which mimics natural forests, provides a refuge for wildlife and ecosystem services and requires fewer, if any, agrochemicals. Can coffee farms be managed in a way that protects wildlife habit and the environment, while at the same time producing a viable, profitable crop for the farmers?

We will examine the complexities of this question through lectures and discussions, speaking with coffee farmers and researchers, and conducting our own field work. This course will explore the ecology of coffee landscapes; assess coffee certifications such as shade grown, organic, Rainforest Alliance, and Smithsonian Bird Friendly; examine socio-economic and environmental issues associated with the coffee industry; and provide insight into the challenges that farmers face and the complexities involved in defining "sustainable" coffee.

SEE-U Costa Rica has been officially approved by Columbia, but development is still ongoing. If you are interested in the course, please email <a href="mailto:eices@columbia.edu">eices@columbia.edu</a>.

The deadline to express your interest in the course is April 12.
